memo: Valve Design Project Reorganization

The VDP team will present to the OPT565 director and to the team at least five methods for selecting a new design point along with one candidate test point. Presentations will be on Wednesday Feb 14, each lasting no more than five minutes. Each team member must be associated with at least one presentation. After the presentations, the points selected for testing will be determined by blind ranked-choice voting. Presentations must include: concept description, relevant mathematical/statistical/experiential strengths of subteam members, predicted efficiency with justification. The VDP team will organize the presentations and ensure that these conditions are satisfied.
